

Migration Tool

Migration Tool

The Migration Tool represents the plug-in family of all classes or programs that handle a transformation or correction of a stream. The transformation can output a new file from the same format or from one format to another one (e.g., TIFF to J2K).

Plug-in parameters

Depending on the specific implementation, some of the plug-ins may require parameters and some not. If the plug-in does require parameters, those will be populated on step 2 of the Add Alternative wizard (preservation plan).

Usage

A list of the implemented Migration Tool plug-ins are available on step 1 of the Add Alternative wizard (preservation plan).

Alternative Name	-	Target Format ID	-	Alternative Created By	admin1
Plan Name	Advanced plan for tif files	Plan Creation Date	26/05/2020	Plan Created By	admin1
Source Classification	Image (Mix)	Source Format	fmt/353	Risk Code	Zero Applications

Add Alternative Wizard - Step 1

Implementations

Rosetta includes four implementations of the Media Converter plug-in:

- MP3toWaveMigrationTool – A script plug-in to convert MP3 files to WAV
- RtfMigrationTool - A script plug-in to correct the rotten bit in RTF files
- tiff_2_jp2_lzw_compression - A script plug-in to convert TIFF files to JP2 (JPEG2000)
- tiff_2_tiff_lzw_compression - A script plug-in to convert TIFF files to TIFF
