

Plug-In Management Overview

Plug-In Management Overview

As part of the Rosetta open platform approach, and to allow customers to apply their own logic and tools to Rosetta, a mechanism for installing and using plug-ins has been implemented in Rosetta. This mechanism is available through the Administrative interface.

This chapter will cover the supported plug-in types from functional and implementation perspectives. It will not cover technical aspects of the plug-in framework. For technical information, see the Plug-in Guide documentation in the Developer's Network

(<http://developers.exlibrisgroup.com/rosetta/integrations/plugins>).
