

Virus Check

Virus Check

The Virus Check plug-in allows customers to use several customized virus check tools.

Plug-in Parameters

Depending on the specific implementation, a plug-in may or may not require parameters. If the plug-in does require parameters, they are populated during installation of a new instance of the plug-in.

Usage

A list of the implemented Virus Check plug-ins is available on the Virus Check Task Parameters page.

Task Chains / Details

Task Chain ID: 17591226 Created By: admin1 Created On: 28/09/2016 13:01:48

Format Identification Task - Format Identification Task

* Format Identification Method: FFDroidIdentifier

TechMD extraction Task - TechMD extraction Task

No Parameters

Risk Identification - Run Risk Identification for formats

No Parameters

Implementations

Rosetta includes the following implementations of the Virus Check plug-in:

- Use General Parameter Script – Rosetta will keep supporting the virus check script that is currently stored as a general parameter named uvscan (for backwards compatibility purposes).
- Uvscan script – A dummy implementation of a virus check script plug-in

Note

This is a placeholder only. Install and configure any anti-virus software separately.
