## How to configure a partner for ISO 18626 resource sharing

- **Product:** Alma
- 

### Description

What are the parameters for a partner record for ISO 18626 resource sharing.

### Resolution

When configuring Alma, the parameters are just the same as for ISO 10160/10161 (which is just referred to as "ISO" in Alma terminology). You need to enter a server (XXnn.alma.exlibrisgroup.com), a symbol and a port which is usually 9001.

However, a partner institution which does not use Alma should define the following server:

<https://XXnn.alma.exlibrisgroup.com/...?type=iso18626>

The suffix is not needed when configuring Alma, as Alma simply adds it automatically to the configured URL.

See also [ISO Parameters](#).
