

## Primo VE 2025 Known Issues

The following table lists the known issues for new Primo VE 2025 release features.

Category	Issue	Release
Auto-complete	Auto-complete suggestions are not appearing for local scopes. This fix will be generally available in the Dec 2025 release of Primo VE.	December 2025
WorldCat V2	Due to endpoint changes, WorldCat search using V2 is not currently supported. It will be supported in the June release.	June 2025
CSL Styles	Unable to add the following styles to the Citation Style Language mapping table: bluebook-law-review and bluebook2. The bluebook-law-review/bluebook2 citations are pending the owner's fix, and their progress can be monitored on <a href="#">GitHub</a> .	April 2025
View It	Online Services Order configuration with Additional Preferences = Prefer resources with PO line is currently not supported in Primo VE.	January 2025
Linked Open Data	In the Sandbox environment, there might be some duplications of info cards (related persons on the full record page). This will be fixed in the February Production release.	February 2025
Research Assistant	In the Sandbox environment, the Auto-refinement functionality is not behaving as expected in some scenarios. This will be fixed in the February Production release.	February 2025
Research Assistant	The <b>View More Results</b> link sometimes returns no results in the Sandbox environment. The February Production release will fix this.	February 2025
Research Assistant	Currently, the How to Cite link is displayed by default and should not be because it requires configuration. This will be fixed in the February Production release.	February 2025
Thumbnails	Google has currently blocked the Exlibris proxy servers we use to obtain thumbnails. Until Google lifts the restriction, Primo will show the OTB thumbnail for Google requests.	July 2025
