

## API permissions for Microsoft Azure (Graph)

### Question

What type of permission should be configured in Microsoft Azure (Graph) when the mail handling definition is set to Send using MS Graph APIs in Alma?

### Answer

If Azure is accessing the API on behalf of a user, select Delegated permissions.

If it's accessing the API as itself without a signed-in user, select Application permissions.

Please contact ExLibris support for a Python script that can be used to test the configuration. If an email is sent using the script, the configuration is correct in Alma.
