## Validation Configuration

[Click to play](#)

Duration: 04:56 min.

<b>Description</b>	There are several methods for validating student Attendance in campusM. The One-Time Code and QR Code methods are validated on the client-side, while Geolocation, Crowdsourcing, and IP are validated on the cloud-side. In this session, we'll guide you through selecting the check-in types to use, and how to configure the corresponding validation methods.	<b>Attachments</b>  <a href="#">Handout</a>
<b>Target Audience</b>	New and existing customers with responsibility for managing/maintaining their campusM instance.	
<b>Prerequisites</b>	None
