

Rapido- Completed- H2 2025

H2 Roadmap Items

User Experience

CERV: Parse More Volume Formats for Multivolume Works

What's New	Highlights	Impact
From the community: Rapido to parse more volume formats for multivolume works	5 new volume format scenarios, determined by community, will be parsed for multivolume works. See September Release Notes	Users requesting specific volumes will be better able to have their needs met.

NDE for Rapido

What's New	Highlights	Impact
The Next Discovery Experience User Interface, NDE, will improve the user experience through a more intuitive, visually appealing, and modern design.	Provide a more engaging platform that enables productive interactions. By focusing on simplicity, visual appeal, and incorporating user input, the redesigned interface will make it easier for users to access the information they need. The improvements aim to foster satisfying and productive experiences across the platform. See December Release Notes	Ensure users can quickly and efficiently navigate the library experience.

Staff Efficiencies

CERV Enhancements: Customize Reject Reasons

Whats' New	Highlights	Impact
Community Identified: Preference to be able to customize	Customize internally	Library customization of reject reasons further

Whats' New	Highlights	Impact
reject reasons and have the reasons available in analytics.	visible reject reasons. See June Release Notes	allows libraries to personalize their experience.

Automatic Suggest for Acquisition

Whats New	Highlights	Impact
Enable suggest for acquisition within the borrowing workflow.	Rapido libraries have the options to convert to purchase and search in Rialto market. Rapido will support staff decisions for this workflow. See July Release Notes	Support staff workflows around items of interest for purchase.

Idea Exchange! Partner Visibility on Receive Items

Whats New	Highlights	Impact
Add lending partner name to receiving item screen	Include partner name on the receiving screen. This information affirms staff decisions in updating the request. See June Release Notes	Ensure you are receiving the correct book from the correct library.

Idea Exchange! Request Metadata Changes in Request History

Whats New	Highlights	Impact
Changes made to the resource information section of the request will be in the request history.	The full view of the request's history will track any metadata changes made to the request details. See December Release Notes	Transparency and visibility to request changes made by staff. Gives staff visibility when troubleshooting or when viewing what changes and efforts have already been made in working on hard to fill requests.

Connect

Rapido Connections

What's New	Highlights	Impact
Improve connections with partners and experience consistency of these connections.	Extend Rapido functionality like participating items and pod terms for Rapido libraries when connecting to partners directly. See Release Notes	Ease Configurations and streamline expectations across requests within Rapido with Rapido partners.

Docline Integration

What's New	Highlights	Impact
Connect with Docline partners.	Integration with Docline for borrowing requests. See December Release Notes	Use the Docline partner to send unfilled borrowing requests to Docline Network.

Self Registration of Library Partners by Staff

What's New	Highlights	Impact
The self registration functionality enables libraries to support discovery and requesting from their collections to enable their role as lenders in relationships with libraries and organizations that need direct access to their resource sharing services. Libraries will be able to create these accounts and distribute them to their partners.	Self registration functionality can be enabled to allow your partners to register for your library's lending resource sharing services. There is a need in the Rapido community to be able to create the accounts on behalf of your partners and distribute these new credentials. Libraries will be able to create these self registered partner accounts and share credentials to support their partners in their discovery and request journey. See November Release Notes	Empower libraries as lenders to their networks of organizations, libraries, researchers, and others that rely on them as a lender. Libraries will be able to create and distribute the credentials need for these partners to discover and request with their library.

Self Registration of Library Partners via API

What's New	Highlights	Impact
The self registration functionality enables libraries to support discovery and requesting from their collections to enable their role as lenders in relationships with libraries and organizations that need direct access to their resource sharing services. Libraries will be able to use an API to bring in information needed to create these partner accounts.	Self registration functionality can be enabled to allow your partners to register for your library's lending resource sharing services. There is a need in the Rapido community to be able to create the accounts on behalf of your partners and distribute these new credentials.
