
How to install ImageMagick

- **Product:** Aleph
 - **Product Version:** 23, 24 (ADAM)
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Description

Since August 2025 ImageMagick is no longer delivered as 3rd party tool through the Third Party Installation (SP 6 - 10).

If you have used ImageMagick in the past, e.g. to display ADAM objects, follow the instructions below to install ImageMagick as part of the operating system.

Resolution

A. for existing installations:

1. install ImageMagick

ImageMagick is now available from EPEL repository.

For more details about how to use EPEL, please refer to [How to use Extra Packages for Enterprise Linux \(EPEL\)?](#).

Package full name (with architecture) is ImageMagick.x86_64 but the short name is enough for installation as the default is 64 bit packages.

2. delete the existing softlink from \$aleph_product/local

```
rm im
```

```
lrwxrwxrwx 1 aleph exlibris 38 Aug 16 2023 im -> /exlibris/product/ImageMagick-6.6.1-10/
```

B. for new installation

Follow instructions as described under A.1

Example for the usage of ImageMagick

```
convert 31213361.svg -resize 565x565 31213361.png
```
