Developments 

Navbar Analytics

April 2026

A new **Navbar** dimension is now available in the **Home Page** and **Home Page by Roles** subject areas in campusM Analytics. This enables campusM administrators to monitor the app engagement through the taps on the Navbar menu items for their specific institution. For more information, see [Home Page](#) and [Home Page by Roles](#) on the [Subject Areas](#) page.

New Task Board Configuration Vendor

April 2026

In a continuous effort to improve productivity and organization, a new vendor has been added to the Task Board Product Integration that is entirely managed within App Manager. Institutions can now assign tasks to students based on their App Role with no API required.

Tasks

Task 1 📄 ✖

Task Title*
The title of the task

Sign up for Graduation Ceremony!

Description
Optional plain-text description for this task

Sign up at the main office, and make sure to bring your student ID and graduation approval.

Due Date
Choose a due date for this task. This will make the task appear in the campusM Calendar.

Tue 21 Apr 2026 ✖

Start Time
Start time in 24-hour format (e.g., 10:00). Requires a Due Date.

HH:MM (e.g., 10:00)

End Time
End time in 24-hour format (e.g., 14:00). Requires a Due Date.

HH:MM (e.g., 14:00)

Roles
Choose the role(s) that this task will be exposed to. Leaving this blank will expose the task to all users.

BA = 3rd Year ✖ | ▼

For more information, see [Task Board](#).

Notifications Analytics

March 2026

A new **Notifications** subject area is now available in campusM Analytics. This enables campusM administrators to monitor the app engagement through notifications for their specific institution. Additionally, administrators can compare their data to the average data of the institutions in their region. As notifications may contain sensitive information, the Notifications Analytics data does not include notification content. The **Notifications** subject area contains the following new fields for both local and regional analysis:

- **Number Sent** — The number of notifications sent by the administrators
- **Personalised** — Displays whether the notification was personalised or not. Personalised notifications are notifications with fewer than 10 recipients.
- **Number Received** — The number of expected recipients of a notification at the time the notification was created
- **Number Read** — The number of notifications read by the recipients
- **Engagement** — The engagement rate (**Number Read** divided by **Number Received**)

For example, after sending a notification, you can cross-reference the data with other Analytics subject areas to determine whether a certain notification drove engagement in the app.

While the Notification Center in App Manager only displays 12 months of data, the Notification Analytics contains all data from 2019 onward. For more information, see the relevant section in [campusM Analytics Subject Areas](#).

Task Board Tasks Synced to Calendar

March 2026

In a continuous effort to improve productivity and organization, tasks from the Task Board Product Integration that include a date and/or time are now automatically synced to the campusM calendar. This is the first among several upcoming Task Board features designed to support student success around academic organization.

For more information, see [Task Board](#).

Favorites Container

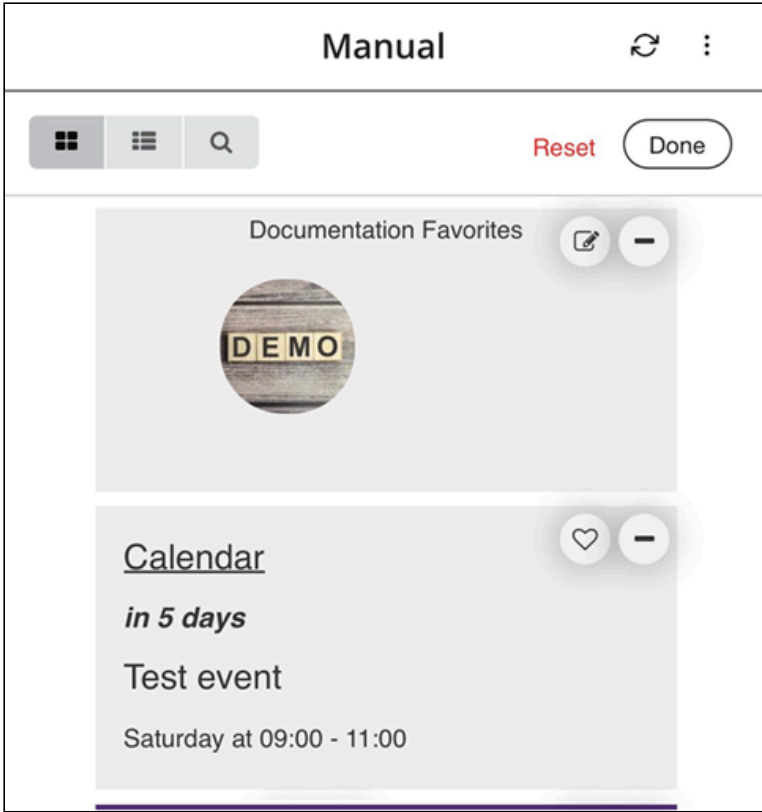

February 2026

A new type of tile container has been introduced to campusM: a Favorites Container. Unlike the regular type containers that are controlled by the administrator, when personalization is enabled for an App Profile, campusM end-users are fully in control of their Favorites Container.

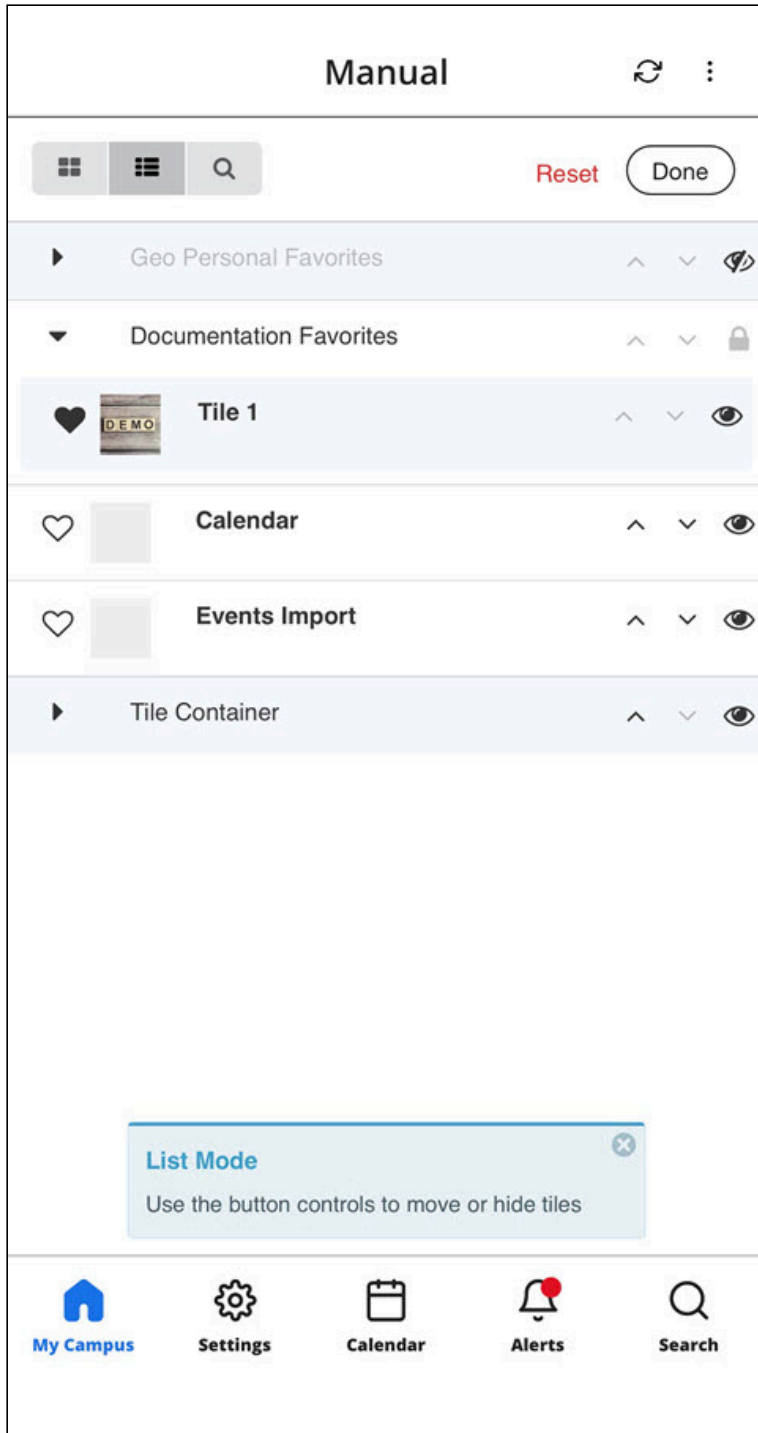

Favorites Containers enable campusM users to keep their favorite tiles in a single tile container. Once users select a tile as one of their favorites, the tile automatically disappears from its original place and moves to the Favorites Container for easy access.

Note

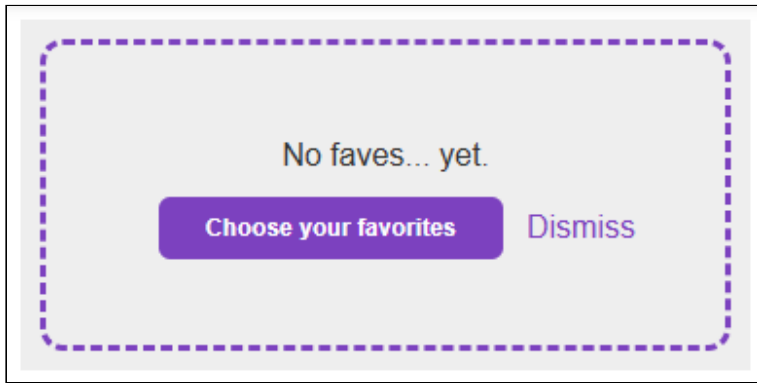

- At time of release, any **existing App Profiles** will have a Favorites Container added, and it will be hidden by default - but still accessible to the end-user via the Arrange function if Personalization is enabled.
 - **New App Profiles** added after the release will have the Favorites Container added and displayed to end-users by default.
 - For more details on how to configure the Favorites Container, see [Configuring Tile Containers](#).
-

An empty Favorites Container

For more information and configuration options, see [Configuring Tile Containers](#).

Due Dates from Blackboard Assignments are Available in campusM Calendar

February 2026

Due Dates for assignments from the Blackboard Product Integration are now imported straight into the campusM calendar. The Blackboard Due Dates are shown as all-day events with the exact time of the Due Date event specified in the event description. These events also include a link to the assignment in the Blackboard application.

A Blackboard Due Date Event in campusM Calendar

campusM users must log in to the Blackboard Product Integration in campusM to see the assignments' Due Dates in the campusM Calendar.

For more information and configuration options, see [Blackboard - Due Dates Calendar](#).

Due Dates from Canvas Assignments are Available in campusM Calendar

February 2026

Due Dates for assignments from the Canvas Product Integration are now imported straight into the campusM calendar. The Canvas Due Dates are shown as all day events with the exact time of the Due Date event specified in the event description. These events also include a link to the assignment in the Canvas application.

CampusM users must log in to the Canvas Product Integration in campusM to see the assignments' Due Dates in the campusM Calendar.

For more information and configuration options, see [Canvas - Due Dates Calendar](#).

Terms of Use Removed from the App Manager

February 2026

In order to comply with legal requirements, Clarivate's "Terms of Use" document can no longer be edited from the **App Manager > General Settings**, and the **Terms of Use** field was removed. To have the "Terms of Use" text updated for your application, open a Clarivate support ticket.

AEK Framework Updated to Support Node.js 20

February 2026

Our AEK (Application Extension Kit) framework has been updated to support Node.js 20 in order to improve the security and stability of AEK screens and tiles. This also improves support for Node.js 18. For more details please refer to the campusM Slack channel (which you can join by requesting an invite link [via a support case](#)).

Tile Containers Analytics

January 2026

Tile Containers are now supported in campusM Analytics. A new **Container** field was added to the **Home Page** dimension in Analytics for both the **Home Page** and **Home Page by Roles** subject areas. Clicks on tiles within a Tile Container also record the name of that container. The value of the **Container** field in Analytics is null for clicks on tiles that do not belong to a tile container.

This enables campusM administrators to view the total number of clicks on tile containers by excluding the **Menu** field from the analysis, as well as see the total number of clicks on tiles by excluding the **Container** field.

Data collected from the launch of the Tile Containers feature will become available in Analytics beginning January 2026.

Institutional Privacy Policy Added to campusM

January 2026

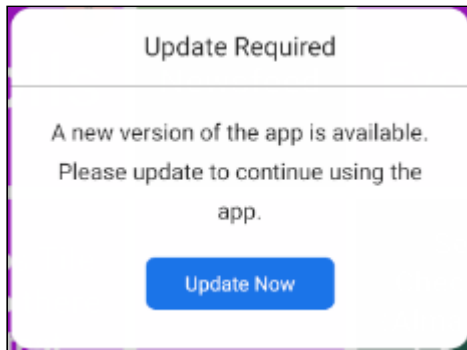

The "Institutional Privacy Policy", which was previously only available in the App and Google Play Stores, is now available

in campusM. Users can find it in the mobile app **Settings** page, or in the web-app top-right menu.

Force Upgrade Implemented

January 2026

React Native now supports Force Upgrade, enabling campusM administrators to implement it to ensure the users have the latest version of the application. When users log in to their application and a new version is available, campusM displays a pop-up that forces them to update before they can continue using the app.

Update Required pop-up

To define the minimal supported campusM version required for Android and iOS platforms, please open a case to our Support team.

For more information, see the relevant section in [Configuring App Basics](#).

Resolved Issues

- **April 2026 Platform: All SF: 08325321**
In some cases, when exporting events registrations from the Events PI, the dates of the events were incorrect. This was fixed.
- **April 2026 Platform: Web SF: 08131417**
When using the Attendance Export function from inside App Manager, time zone information was not accounted for in the resulting file. This was fixed.
- **April 2026 Platform: iOS SF: 08294146**
In some cases, custom fields in the ID card product integration appeared twice after adding the ID card to Apple Wallet. This was fixed.
- **April 2026 Platform: iOS, Android SF: 08185932**
In the Manage Channels Subscription page, long channel names pushed the toggle component off of the edge of the screen. This was fixed.
- **April 2026 Platform: Android SF: 08294146**
Certain components in the Self-Checkout PI were not being announced correctly when using a screen reader. This was fixed.
- **April 2026 Platform: Android, iOS SF: 08314294**
In some cases, the badge count on Primo/PrimoVE live tiles was not displayed correctly when the tile was placed in a tile container. This was fixed.
- **April 2026 Platform: iOS**
In certain situations, the favorites in the Newsfeed PI were not cached correctly. This was fixed.
- **April 2026 Platform: All**

Missing Translation Keys were added for Favorites tiles.

- **March 2026 Platform: All SF: 08115000**
In some cases, the HTML editor in Creative Studio did not correctly save the code as inserted. This was fixed.
- **March 2026 Platform: Web SF: 08237899**
When choosing alert groups for an App Role, non-alert groups items appeared as options on the list. This was fixed.
- **March 2026 Platform: Android, iOS SF: 08152834**
In some situations, on mobile, **Grid Mode** was not available when using the **Arrange** functionality. This was fixed.
- **March 2026 Platform: All SF: 08075208**
Previously when a user changed their Tags in **My Profile** section, the relevant tiles on the homepage only updated after a logout and login. This was fixed, and now the relevant tiles on the homepage update upon refresh, in a way similar to roles.
- **March 2026 Platform: All SF: 08076310**
Previously, when a user opened a URL from inside a specific Alert, the back button directed the user to the Homepage of the app. This was fixed, and now the back button takes the user back to the **Alerts** screen.
- **March 2026 Platform: Android, iOS SF: 08294699**
In some cases, the barcode in the **ID Card** product integration did not appear on mobile devices. This was fixed.
- **March 2026 Platform: Web SF: 08288978**
The **Attendance Transaction Viewer** did not display the **Absence Reason** field correctly. This was fixed.
- **March 2026 Platform: Web SF: 08128821**
Using a campusm:// URL scheme when creating a linkout in Creative Studio did not work as expected. This was fixed.
- **March 2026 Platform: Web SF: 08140970**
In the **Notification Center** in App Manager, the popup showing a summary of the last notification in the list caused the screen to flicker. This was fixed.
- **February 2026 Platform: App Manager**
In some cases, previously sent notifications did not appear as expected in the Notification Center in App manager when filtering by date. This was fixed.
- **February 2026 Platform: All**
When choosing dates in various parts of the app, the color of the current date, and the selected date were identical. This was fixed.
- **February 2026 Platform: Web SF: 08009294**
Previously, Analytics for Generic Live Tiles were not collected as expected. This was fixed, and they should now generate the same analytics as all other tiles.
- **February 2026 Platform: iOS**
In some cases, when using the Maps feature on iOS devices, Google Maps did not appear as expected. This was fixed.
- **February 2026 Platform: Mobile**
In some cases, the red badge on the Alerts icon in the bottom Navigation bar remained visible, despite all alerts being marked as read. This was fixed.
- **February 2026 Platform: Web SF: 08264466**
In the app settings, navigation to the Manage Notification Channels page was unavailable in from the Setting page. This was fixed.
- **February 2026 Platform: iOS**
In some cases, using the Search function on the Events PI caused the screen to zoom in unexpectedly on iOS. This was fixed.
- **February 2026 Platform: iOS**
In some cases, using the Search function on the Newsfeed PI caused the screen to zoom in unexpectedly on iOS. This was fixed.
- **February 2026 Platform: All SF: 08262544, 08275215**
In some cases, students using the Attendance feature were able to check into class outside the defined check-in window by changing the date and time settings on their device. Additional validations to the check-in time were added, and check-ins outside the defined check-in window will not be validated.
- **February 2026 Platform: Web SF: 08130870**

In some cases, in App manager, the "Test API" button that appears in several Product Integration configuration pages did not function as expected. This was fixed.

- **February 2026 Platform: Android SF: 08196885**

Additional improvements were added to insure proper user authentication in AEK screens, which will reduce errors for users.

- **January 2026 Platform: Web SF: 07948983**

In some cases, the **getPersonAttribute** API call returned multiple duplicate attributes for a single user. This was resolved.

Link to the relevant API documentation: <https://developers.exlibrisgroup.com/campusm/apis/get-person-attribute/>

- **January 2026 Platform: iOS SF: 08152815**

In the **Library Self-Checkout** Product Integration, iOS users could not see the input field when manually typing in a barcode. This was fixed.

- **January 2026 Platform: Android SF: 08188616**

In AEK, when using the image picker, Android users were sometimes unable to use the native Android navigation at the bottom of the screen. This was fixed.

- **January 2026 Platform: All SF: 08231777**

In the **ID Card** Product Integration, the user's image did not always appear as expected when it was taken from Alma. This was fixed.

- **January 2026 Platform: Android, iOS SF: 08231272**

In languages other than English, **Calendar** reminders were sometimes not translated fully. This was fixed.

- **January 2026 Platform: Android, iOS SF: 08232237**

In some cases, end-users saw an error message when clicking a link on a content page leading to another content page. This was fixed.

- **January 2026 Platform: Web SF: 07702409**

Previously, when a **Tile/Tile Container/Page** has been deleted from campusM, any analytics associated with those objects disappeared from campusM Analytics. This was fixed, and now when a **Tile/Tile Container/Page** has been deleted, the **Menu/Page ID** appears instead of its name. This allows campusM Admins to still differentiate between clicks coming from different tiles. However, the tile names are still deleted along with the tiles.

- **January 2026 Platform: Android SF: 08269836**

Previously, the reminder push notification for Attendance on Android did not lead into the app as expected. This was fixed.

- **January 2026 Platform: Android, iOS SF: 08242352**

In some cases, deep linking did not open the Native app as expected. This was fixed.
