## Project Gutenberg "View Online" tab is not opening in iFrame

- **Article Type:** General
  - **Product:** Primo
- 

### Problem Symptoms:

- Primo search retrieves Gutenberg Project records from Primo Central, that have the availability status "Full text available"
- When clicking on "View Online" it is opened as a blank iFrame
- A Click on "Open this frame in a new window" opens Gutenberg page

### Cause:

This is security behavior of Gutenberg html pages, the X-Frame-Options defined as DENY.

### Resolution:

To set Gutenberg Project records to always open in a new window from Primo:

- 1- Go to the Mapping Tables > URLs Attributes, and edit it under the institution level.
- 2- Create a new row:

Add the following as URL prefix: <http://www.gutenberg.org/>

Add the following as Attribute Name: OpenInNewWindow

Add the following as Attribute Value: true

- 3- Save and deploy

### Note:

If you have multiple URL prefixes with overlapping content, the more specific URL prefix will prevail (regardless order of the lines in the mapping table).
