## Add a Single Subscription (No Specific Target) in SFX and Primo

- **Article Type:** General
  - **Product:** Primo
  - **Product Version:** 4
- 

### Desired Outcome Goal:

Make articles from a new subscription discoverable via Primo and Primo Central (for example, The Wall Street Journal subscribed to directly from ProQuest).

### Procedure:

1. Collect the required details:
  - a. specific edition (prefer ISSN over journal title)
  - b. threshold (coverage limitations)
2. In SFX, locate the most general package that applies. For example, in the above example, a good target is PROQUEST\_NEWSSTAND\_NATIONAL\_NEWSPAPERS\_NEW\_PLATFORM which provides coverage back to 1984.
3. In SFX, activate the Object, Service, and Target, adjusting the Object threshold, if necessary.
4. In the SFX Target Service,
  - a. turn off AutoActive
  - b. turn on AutoUpdate
  - c. if relevant, turn on Use Proxy
5. In Primo Central, activate a collection that provides searching for this title.
  - If it is not known which collection provides access, send the question to the Primo Central team via a Case.

---

## Additional Information

- \* Updates to SFX holdings entered by Thursday morning are generally synced with Primo Central over the weekend.
- \* There is not currently a Primo Central interface to search a specific journal and identify relevant Primo Central collections.

**Category:** Interoperability (SFX)

**Subject:** Primo
