Question

What gets queued to the Global Headings Change (GHC) queue when a name or name/title heading is changed?

Answer

1. Name heading change, where main entry selected in 008 of changed Authority record
 - a. Any linked 1XX name heading will be changed
 - b. Any 4XX, 7XX or 8XX will change as long as the bib field does NOT include a subfield t. Subfield t turns the heading into a name/title heading.
 - c. Note: This means that not all the bibs linked to a name heading will actually be changed by GHC.
2. Name heading change, where subject entry selected in the 008 of changed Authority record
 - a. Any 6XX linked to this heading will be changed. there are no caveats, because we are looking at a whole subject heading.
3. Name/title heading change, where main entry selected in the 008 of changed Authority record
 - a. No multi-field heading will be changed. 1XX/240,243,245 combinations are queued but NOT changed by GHC. They will be removed when Catjob 12 is run.
 - b. Any 4XX, 7XX or 8XX will be changed as long as it matches the field. This means it will include the subfield t.
4. Name/title heading change, where subject entry selected in the 008 of changed Authority record
 - a. Any 6XX linked to this heading will be changed. there are no caveats, because we are looking at a whole subject heading.
