
How to use logrotate to manage Voyager logs

- **Article Type:** Q&A
 - **Product:** Voyager
 - **Product Version:** 8
 - **Relevant for Installation Type:** Dedicated-Direct; Direct; Local;
-

Question

How to automate Voyager logs management?

Answer

Run "man logrotate" or google logrotate to get more information on command. See attached sample configuration file - logrotate.conf.

1. SSH to server as root.
2. Run logrotate manually in test mode: `logrotate -dv /etc/logrotate.conf` It produces output describing what logrotate would do, without actually doing it.
3. Save `/etc/logrotate.conf`
4. Add new section to /etc/logrotate.conf based on requirement. See sample file for reference.
5. Verify changes by running: `logrotate -dv logrotate.conf`
