Bug Report Form for Issue 16384-17553

Module(s): NCIP

Server platform(s) affected: Solaris

Release(s) replicated in: 8.1

Expected results:

LookupUserResponse should include the patron's first name.

Actual results:

If PATRON.MIDDLE_NAME is populated, NCIP is sending it as the given name. Otherwise, NCIP correctly sends patron's first name.

Workflow implications: Incomplete patron names are associated with the request.

Workaround: If the MIDDLE_NAME is not populated, the First name is correctly sent.

Resolution:

Fixed in Voyager 8.1.2
