## Checking out multiple items with RFID in Aleph

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 20
  - **Relevant for Installation Type:** Dedicated-Direct; Direct; Local;
- 

### Question

When checking out more than one book simultaneously and placing them on the RFID reader, only one barcode is detected.

Can the RFID reader be configured to check out multiple books?

---

### Answer

Due to circulation statuses (e.g. "On Hold") and/or item process statuses ("Bindery", "Damaged"), only one RFID tag can be in the radio range of the RFID reader when an item is being scanned.

When a status message appears, it causes the cursor to move away from the barcode field, which stops the loan or the return.

---

### Additional Information

For more information, see Aleph > Technical Documentation > How To > Circulation in the Documentation Center, "How to Set Up Support for Nedap RFID in Aleph".
