
Registration code is needed when printing XSL templates from the GUI

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
 - **Relevant for Installation Type:** Dedicated-Direct; Direct; Local;
-

Problem Symptoms

1. When attempting to print a form in the Aleph GUI that uses an XSL template, the following error displays: "Enter Registration Code" and a field.
2. This message does not display if "NewPrintType" in `al500/alephcom/tab/alephcom.ini` is set to N. "NewPrintType" is recommended to be enabled at circulation desks where receipt printers and regular printers are used.
3. If the field is left blank and "Enter" is clicked in the error message, nothing is printed.

Cause

When the Aleph version or the PC operating system is updated (e.g. Aleph 20 to 22, or Windows XP to Vista), a registration code needs to be re-entered into the field in the error message box.

Resolution

1. Locate the registration code that appears in `al500/alephcom/bin/htmlprint.ini`.
2. Copy and paste this code into the error box.
3. Restart Aleph.

Additional Information

In earlier versions of Aleph (e.g., Aleph 17 and 18), there was a separate `bin_v` folder for Vista and other newer versions of Windows.

In those Aleph versions, the contents of the `bin` folder needed to be copied into `bin_v`.

Now when updating to a new Aleph version, `bin` is automatically updated and `bin_v` is not, so files have to be re-copied.
