

## Title field labeled Author in WebVoyage search results

- **Product:** Voyager
- 

### Question

When searching by author in OPAC, the results list the author's name on the first line of each hit. The title is listed next but is mistakenly labeled "author". Can this be changed?

### Answer

WebVoyage does not include labels for search results by default - if search results display labels, this is a customization added to the skin locally. The customization can be rolled back, or the search result fields can be re-ordered to match the labels in System Administration > Search > {index being searched} > Edit > Search Results.
