
Command Keyword searches fail when combined with 008P, 008L

- **Article Type:** Known Issue
 - **Product:** Voyager
 - **Product Version:** All
 - **Relevant for Installation Type:** Dedicated-Direct; Direct; Local; Total Care
-

Symptoms

- * Command search using 008L or 008P returns no results
 - * Command search using 008L or 008P and another index gives message "The search failed"
 - * All subsequent searches fail.
-

Defect Status

Issue VYG-4232 is currently in Development.

Replication Steps

1. Cataloging > Search > Boolean
2. Search 008P or 008L:
008P enk
008L eng
3. Search returns no results, though there are matching records
4. Search a variable length field:
245A blue
5. Search returns results, some of which also match the previously searched 008P or 008L
6. Now combine them:
245A blue AND 008L eng
7. Search fails
8. All subsequent keyword searches fail until the client is closed and reopened.

Additional Information

Command searches in WebVoyage OPAC fail as well when 008L or 008P are used.

Workaround

Use Index Selection tab in Cataloging client to search 008L and 008P left-anchored indexes.

Have Data Services [create a parallel normalized left-anchored index](#) in the WebVoyage Command Search for the 008L and/or 008P (a quote will be required).
