
What do the FullFund scripts do?

- **Product:** Voyager
 - **Product Version:** All
 - **Relevant for Installation Type:** Dedicated-Direct; Direct; Local; Total Care
-

Question

What do the FullFund scripts (FullFundPendingExpenditures3.sql, FullFundPendingCommitments3.sql, FullFundExpenditures.sql, FullFundCommitments3.sql, FullFundDiagnostic.sql) do?

Answer

FullFundDiagnostic.sql can be run regularly to help identify any discrepancies in FUND.COMMIT_PENDING, FUND.COMMITMENTS, FUND.EXPEND_PENDING, and FUND.EXPENDITURES.

Based on the results of the diagnostic any or all of the following would be run to correct the relevant total.

FullFundPendingCommitments3.sql	recalculates the pending commitments and updates the fund summary totals (FUND.COMMIT_PENDING)
FullFundCommitments3.sql	recalculates the commitments and updates the fund summary totals (FUND.COMMITMENTS)
FullPendingFundExpenditures3.sql	recalculates pending expenditures and updates summary totals (FUND.EXPEND_PENDING)
FullFundExpenditures.sql	recalculates expenditures and updates summary totals (FUND.EXPENDITURES)
