

## Rosetta CSV migration

- **Article Type:** Q&A
  - **Product:** Rosetta
  - **Product Version:** 4.1
- 

### Question

Must CSV labels be aligned with the labels that appear in the UI?

---

### Answer

In 4.1, existing CSV mapping tables have been migrated to CSV templates.

However, existing labels must be aligned with the labels that appear in the UI.

If users submit csv data based on old templates the field names will need to be updated (these can be located by viewing the template in the CSV Template section).

Alternatively, users can leverage the general functionality that was added in v4.0, to automatically generate a template for a given zip file.
