
System monitor shows "unable to extend temp segment" error

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

A system monitor shows that an "unable to extend temp segment" error has occurred, and the Oracle `./trace/alert_aleph2n.log` (which can be seen in `util o/3/1`) has an "ORA-1652: unable to extend temp segment by 128 in tablespace TEMP" error.

Cause:

Uncertain

Resolution:

This problem and its handling are described in Article 000033341 ("Unable to extend temp segment by nnn in tablespace TEMP") (https://exlibrisgroup--c.na26.visual.force.com/apex/VF_ArticleView?id=kA3320000004K7Q&srKp=ka3&srPos=0).

Additional Information

As suggested in that Article, this problem will often be seen in connection with a particular function, but in this case it was unclear just what the function was.
