
Set ODBC File Permissions

- **Product:** Voyager
-

Question

Set the proper permissions on ODBC-related files in Windows

Answer

1. Open Windows Explorer & navigate to the `C:\Oracle\product\10.2.0\client\network\ADMIN\` (or similar depending on your installation) directory
2. Right-click on the `tnsnames.ora`, then click on Properties
3. Click on the Security Tab, then click on Authenticated Users
4. Click Edit, check the Allow box next to "Full control", then click OK.
5. Hit OK on the Properties box
6. Repeat steps 1-5 for the `sqlnet.ora` file

Additional Information

Windows Active Directory Group Policy and/or User Access Control sometimes prevents the ODBC drivers from reading these files properly.
