

How to update the local IP in Rosetta

- **Article Type:** General
 - **Product:** Rosetta
-

Desired Outcome Goal:

How to update the local IP in Rosetta

Procedure:

1. Verify that etc/hosts file in the server is configured correctly
2. Verify that pds configuration is using hostname
3. In the server, open in the global.properties file - please backup the file first

```
>>dps_conf
>>vi global.properties
```

 - a. Update the server ip
 - b. Verify that all configurations are using hostname rather than ip
 - c. Apply changes by running dps_config.csh

```
>>dps_bin
>>sh -f dps_config.csh
```

Additional Information

Rosetta do support IP changes, however it is very complicated to change hostname and needs to be done by installation team.
