## Service pack fails to download: sp\_check.stat: "SP integrity suspiceous"

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

Service pack process encounters "integrity" problems....

The sp\_extract.log file has:

```
./sp.tar  
./sp.install  
./gnu_tar  
sp.bin.SunOS-new.tar  
tar: sp.bin.SunOS-new.tar: Wrote only 6656 of 10240 bytes  
tar: Error exit delayed from previous errors
```

And the sp\_check.stat:

```
Errors extracting binary SP files  
SP integrity suspiceous
```

Note: there are messages indicating that some files were successfully downloaded but then, later, these errors.

### Resolution:

In one case: "Problem appears to have been caused by a shortage of disk space caused by files which the operating system viewed as "open" but which were still counted among the free blocks."

In another case, running the Service Pack installation again -- without any change to the system -- was successful.

KB 16384-32354 might be relevant in some cases.
