## Service Pack, installation command

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

Following the latest instructions (Nov. 20, 2005), "The ALEPH Service Pack", chapter 6 "How Do I Install the ALEPH Service Pack" (pages 7 and 8) we get an error on step 5 page 8 as follows:

```
cat sp_16_02.tar.gz_* | gzip -d | tar xvf -  
cat: No match.
```

```
gzip: stdin: unexpected end of file  
tar: blocksize = 0
```

Please let us know what we need to do in order to complete step 5.

### Resolution:

Please do the following command:

5. From the Unix prompt:

```
cat xxxxx.tar.gz | gzip -d | tar xvf -
```

(where xxxxx.tar.gz is the name of the file you ftp-ed to your server).

If the file name contains brackets, they need to be preceded by a backslash. Example:

```
cat ALEPH-16\[1].02-ServicePack-1-1478.tar.gz | gzip -d | tar xvf -
```

You get three files:

```
sp.install*  
sp.tar  
gnu_tar*
```

Also, make sure you ftp this xxx.gz file in binary.
