
Bytestream Extraction / Decomposition Rule

- **Article Type:** Q&A
 - **Product:** Rosetta
 - **Product Version:** 3.2.1
-

Question

What is the difference between the two extraction rules, in :

1. Advanced Configuration > SIP Processing > Processing Definitions > Rules for Bytestream MD Extraction
 2. Advanced Configuration > Deposit > Automatic Decomposition Rule
-

Answer

1. This rule is used to decompose zips during the staging area : the files inside the zip are going through validation, but the zip is staying as zip in Permanent
2. This rule is used to decompose zips during deposit : the files arrive in Rosetta unzip, and go through validation, ... as if they were unzipped from the stat
