## items history fields replace the item fields after label printing

- **Article Type:** General
  - **Product:** Aleph
- 

### Problem Symptoms:

After printing labels from items menu "Print item labels" Aleph automatically changes the fields call no. and collection from that item ? reverting the information on those fields to the previous value.

### Cause:

Entry in \$alephe\_root/pc\_server\_defaults  
setenv item\_label\_restore Y

### Resolution:

Change the entry item\_label\_restore in \$alephe\_root/pc\_server\_defaults to "N"

### Example:

setenv item\_label\_restore N

---

## Additional Information

There is an explanation in System Librarian's Guide - Items

item\_label\_restore

This entry works together with the GUI-Circulation utility Change Item Information.

Possible values:

Y - When the user changes item information (using the Change Item Information utility in GUI-Circulation) and the Permanent Change field is not checked, as soon as the item label is printed, the original item information will be restored and it will replace the non-permanent information. The item label will also include the original item information.

N - The original item information will not be restored when the item label is printed.
