## Oracle error: io\_z110\_write

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

---

### Problem Symptoms:

In the \$LOGDIR/pc\_server.log or any other log file there is the error message

Oracle error: io\_z110\_write

ORA-01653: unable to extend table VIR01.Z110 by 8192 in tablespace TSx

io\_z110\_write: REATTEMPTING TO WRITE Z110...

### Cause:

Tablespace was filled up

### Resolution:

1. Stop all the Aleph server and services in this way
2. `csch -f $alephe_root/aleph_shutdown`
3. Clean the VIR01 library with `util x/8`
4. Restart the Aleph server and services with `csch -f $alephe_root/aleph_startup`

---

## Additional Information

Ask the library manager if you could delete the VIR01 contents.

If `clear_vir01` is being run successfully each night, then a datafile needs to be added to the tablespace in which the `vir01 z110` resides. Ask the Database Administrator to do this -- otherwise, `util o/13/3` can be used to add a datafile to a tablespace.
