## Gale Target Gets OpenURL is Invalid Error

- **Article Type:** General
  - **Product:** SFX
  - **Product Version:** 4
- 

### Problem Symptoms:

Galegroup Targets link to a page showing this error:

The OpenURL is invalid. The Resolver does not support the metadata keys describing the Referent. See the OpenURL Home page for more information.

The metadata keys supported by GPS are:

artnum  
atitle  
aufirst  
aulast  
btitle  
date  
isbn  
issn  
issue  
jtitle  
sici  
spage  
volume

### Cause:

\* Linking Parameter (L/P) table is missing \$\$LOC\_ID value.

### Resolution:

To add \$\$LOC\_ID authentication value:

- 1) Click on "S" button for problematic Gale target in KB Manager target list
  - 2) Click on "L/P" button on the target service level
  - 3) In the resulting "Linking Parameters" screen, find \$\$LOC\_ID field
  - 4) Add the \$\$LOC\_ID value into \$\$LOC\_ID field of L/P table
- If \$\$LOC\_ID value is unavailable, request it from the institution's Gale representative

---

## Additional Information

- \* \$\$LOC\_ID is an authentication id Gale provides to SFX customers
- \* \$\$LOC\_ID should be added to the L/P table for any newly activated Gale Target Service
- \* See Documentation Center > SFX > Technical Documentation > KnowledgeBase Information > SFX Target Configuration Guide > GALEGROUP section
