
CAT: "Print Selected" prints MFHD Loc for Item Perm Loc

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 8.2.0
-

Problem Symptoms:

* When "Print Selected" from item list, Permanent location on printed record is the mfhd location rather than permanent location from item record.

Cause:

This behavior is the result of Issue 16384-22257 / VYG-4661.

Resolution:

VYG-4661 is resolved in Voyager 9.0.0 and higher.

Additional Information

Replication steps:

1. In Cataloging, find or create a set of records such that

- a. MFHD location = Location A
- b. Item 1 Perm Location = Location B
- c. Item 2 Perm Location = Location B
- d. Item 2 Temp Location = Location C

2. From bib or mfhd, click ?Get Items? to display list of item records associated with MFHD.

3. Highlight Item 1 and Item 2.

4. Click Print Selected.

5. Examine resulting record printout and note the following:

- a. MFHD Location : Location A
- b. Item 1 Perm Location : Location A
- c. Item 2 Perm Location : Location A
- d. Item 2 Temp Location : Location C

MFHD Location and Temporary Location are correct; Permanent location uses MFHD location instead of Item Permanent Location.

Workaround: None.
