## CAT: Headings reference info missing for See Also references

- **Article Type:** General
  - **Product:** Voyager
  - **Product Version:** 8.2.0
- 

### Problem Symptoms:

- \* Saving an authority record results in Auth/Ref/Note notation changing to Reference for its See Also entries.
- \* Resaving the authority linked from the See Also reference results in the same behavior happening to its See Also references.

### Cause:

This behavior is the result of Known Issue 16384-20801

### Resolution:

Fixed in Cataloging for 8.2.0.

If you are on Voyager 8.2.0 and experiencing this issue, please open a Support Incident via eService and request the fix for Issue 16384-20801. This fix requires a subsequent HEADINGS regen for full resolution.

---

## Additional Information

### Replication steps:

1. In Cataloging, identify two authority records where each is a See Also reference for the other ? i.e., ?Food supply? and ?Agriculture?:

150 \_ 0 \$a Food supply

550 \_ 0 \$a Agriculture

150 \_ 0 \$a Agriculture

550 \_ 0 \$a Food supply

2. Search for each and note that each comes up in the headings list as Auth/Ref/Note.

3. Open ?Food supply? authority record and click Save to DB.

4. Search for ?Agriculture? and note that now, it comes up in the headings list as Reference.

5. Now open ?Agriculture? authority record and click Save to DB.

6. Search again for ?Agriculture? and note that it now correctly shows Auth/Ref/Note again

7. Search for ?Food supply? and note that now it shows in the headings list as Reference.

8. You can go back and forth saving these records and never will the two show Auth/Ref/Note at the same time until you do a headings regen.

9. If you look at the headings in the database, you'll see that only the See reference is noted in HEADING.OPACREFS and HEADING.STAFFREFS:

```
SQL> select * from heading where heading_id in (196053,252562);
```

```
HEADING_ID
```

```
-----
```

```
NORMAL_HEADING
```

---

DISPLAY\_HEADING

---

I HEADING\_TYPE STAFFBIBS OPACBIBS STAFF OPACR CREATE\_DA UPDATE\_DA

---

196053  
AGRICULTURE AND STUFF  
Agriculture and stuff  
S lcs 13 13 SR SR 17-DEC-12 18-DEC-12

252562  
FOOD SUPPLY  
Food supply  
S lcs 29 29 SNAR SNAR 17-DEC-12 18-DEC-12

10. When you save the "Agriculture" record again, you'll note that the STAFFREFS and OPACREFS fields change for both headings.

SQL> select \* from heading where heading\_id in (196053,252562);

HEADING\_ID

NORMAL\_HEADING

---

DISPLAY\_HEADING

---

I HEADING\_TYPE STAFFBIBS OPACBIBS STAFF OPACR CREATE\_DA UPDATE\_DA

---

196053  
AGRICULTURE AND STUFF  
Agriculture and stuff  
S lcs 13 13 SNAR SNAR 17-DEC-12 18-DEC-12

252562  
FOOD SUPPLY  
Food supply  
S lcs 29 29 SR SR 17-DEC-12 18-DEC-12

Workaround: HEADINGS regen will correct the reference notations.
