
Repeated, unnecessary Oracle information in job logs

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 21
-

Problem Symptoms:

Services which initiate an SQL*Plus connection are creating added SQL parameter information (see Additional information) in the job log. Since many custom jobs initiate multiple baseline Aleph services, their log files are becoming extremely lengthy and difficult to read.

Cause:

```
$aleph_proc/show_proc_env
```

Resolution:

To disable the display of all the information about the environment in the service log, in \$aleph_proc/start_p_proc -- put a hash sign (#) at the beginning of the line

```
source $aleph_proc/show_proc_env
```

The show_proc_env script only displays system environment parameters, and the start_p_proc routine works fine without it.

Additional Information

The following is the added, repeated, extraneous Oracle information:

```
