
print-03: embedded item data omitted in MARC output

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

Problem Symptoms:

Running print-03 ("Download Machine-Readable Records") to export records in MARC Communications Format: item data (from expand_doc_bib_z30) or OWN-field is omitted.

Cause:

The "MARC" output format includes only numeric tags.

Resolution:

Specify "MARC with alphanumeric tags" as the Format (rather than "MARC").

Additional Information

If the vendor the file is being sent to doesn't accept non-numeric tags, the solution is to add a fix routine that changes the Z30 tagging to a numeric field, such as 930. See Article 000001766 ("How to change Z30 tags to numeric tags to send to vendors accepting only numeric").
