
manage-62: Unable to change sublibrary/collection in items

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
-

Problem Symptoms:

Changes to item record collections, sublibraries, and call numbers via manage-62 ("Update Item Records") don't work.

Cause:

In the following case (which is the typical case with most item records) the z30_sub_library, z30_collection, or z30_call_no of HOL-linked items can *not* be changed by manage-62 in the ADM library, and need to be changed by manage-21 ("Global change") in the xxx60 HOL library instead:

- * the item record is connected to an HOL record (000123456),
- * the z30_temp_location is set to "N"; and
- * the xxx50 tab100 has "X852-ITEM-OVERRIDE=Y".

Resolution:

Run manage-21 ("Global change") in the xxx60 HOL library. (The change is propagated to the associated items via the xxx60 ue_01.) See also article "[Direct updates to Item sublibrary, collection, and call number do not work \(when X852-ITEM-OVERRIDE=Y\)](#)".

Before running the manage-21 in xxx60, you should use the file-03 Service to back up the xxx60 z00 table and the affected xxx50 z30 (item) table.

Additional Information

1. p-manage-62.html Help has been updated by v20 rep_change 2368 to include the following note:

"When the item record is connected to an HOL record, and the z30_temp_location is set to "N", and the ADM tab100 has "X852-ITEM-OVERRIDE=Y" - then p_manage_62 can not be used to change the sub library, collection, or call number. In this case - p_manage_21 in the HOL library must be used. "

2. If the problem occurs with item fields other than the z30_sub_library, z30_collection, or z30_call_no, consult KB 16384-61985 ("manage-62 does not alter records in input file").
