
Duplicate address fields for Patron Self-Registration records

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 7.2.3
-

Problem Symptoms:

? Patron records created via Patron Self-Registration have following fields being duplicated in the database (one set for address_line1 and one set for the e-mail address): patron_address.city, patron_address.state_province, patron_address.zip_postal, and patron_address.country.

? Patron records created via Circulation client do not have these fields duplicated.

Cause:

This behavior is caused by Issue 16384-21073.

Resolution:

Fixed in Voyager 8.2.2.

Additional Information

Replication Steps:

1. Create a patron record with an e-mail address via Circulation client.
2. Create a patron record via Patron Self-Registration.
3. Look at patron_address table in DB for each record.
4. Note that patron_address.city, patron_address.state_province, patron_address.zip_postal and patron_address.country show twice (once for address_line1, once for e-mail address) in the record created via PSR.

Workaround: None
