

SysAdmin calendar times revert to 12:00 or 00:00 upon save

- **Product:** Voyager
 - **Product Version:** 8.1.1
-

Problem Symptoms

When editing a calendar, creating a new calendar, or adding a calendar exception, times reset to 12:00:00 am or 00:00:00 upon save and reopen.

Cause

When the operating system's regional setting is set to English (New Zealand), the correct time value cannot be returned by the control used in Voyager's calendar form.

Resolution

Windows XP: Go to Start menu > Settings > Control Panel > Regional and Language Options > Regional Options tab > set to English (United States)

Windows 7: Go to Start menu > Control Panel > Region and Language > Format dropdown menu > set to English (United States)
