## Persistent links do not work when copied to different browser

- **Article Type:** General
  - **Product:** Voyager
  - **Product Version:** 8.1.2
- 

### Problem Symptoms

- Persistent link from bib record in OPAC works properly until persistent link is copied and pasted into a different browser
- Pasting persistent link into different browser session results in "WebVoyage System Error"

### Cause

Typo in skin name in the web.xml file causes no default skin to be assigned in new browser session

### Resolution

Fix typographical errors in web.xml file, found in this directory:

vwebv/WEB-INF

/m1/voyager/xxxdb/tomcat/vwebv/context/

### Additional Information

In web.xml file, default skin is assigned here:

```
<init-param>
<param-name>DefaultSkin</param-name>
<param-value>en_US</param-value>
<description>
The default skin (locale) to use in this application.
This value must exactly match (including case) one of
the ui subdirectory names.
</description>
```
