
ILL barcode generated by the system is incorrect

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 21, 22, 23

Description

Line ...

CSCR-ILL-BARCODE checksum_create_z30_by_doc_no

... in table xxx50/tab/tab_checksum which means that ILL barcode should be created from ADM system number and item sequence of the arrived item is not working as expected.

Example: ILL borrowing request (xxx40 system number) is 122, the ADM number is 5000, item sequence is 10; the correct item barcode should be 5000-10, however the system will generate 122-

Resolution

Please use the following configuration instead:

CSCR-ILL-BARCODE checksum_create_ill_barcode

neither checksum_create_z30_by_seq

nor

checksum_create_z30_by_doc_no are intended to be used for creating barcodes in ILL.

Please see also documentation: 'Aleph SysLib Guide - Integrated ILL', chapter 'The ILL Item values'.

The system will generate barcodes of the following structure then:

ILL-ReqNo-Seq

Example for Request number 561:

- * First item: ILL-561
- * Second item: ILL-561-2
- * Third item: ILL-561-3
