## CVE-2014-6271 (shellshock bash bug) and /exlibris/product/util/bash

- **Article Type:** General
  - **Product:** Aleph
- 

### Problem Symptoms:

After following "Security Update Customer Announcement-Bash flaw - final.pdf" and applying the patch supplied by Solaris:

\* The bash copy used by aleph login (to be checked with 'which bash') under /exlibris/product/util/bash (or /exlibris/product/bin/bash in other installations) is still unpatched

### Cause:

Some installations under Solaris use /exlibris/product/util/bash

### Resolution:

As aleph user run:

```
find /exlibris/product -name bash -exec rm -f {} ;  
rm $aleph_dev/product/bin/bash
```

---

## Additional Information

/exlibris/product/util/bash (or /exlibris/product/bin/bash) is not required by Aleph, ARC or any other Ex Libris product.

Removing the link will cause any process using bash in the Aleph/ARC or other ExLibris product to use /bin/bash which is updated by the OS security patch.

For general information regarding this bash bug see article "CVE-2014-6271: shellshock bash bug".
