## ACQ: Overcommit Warning Override and Approve option not working

- **Product:** Voyager
  - **Product Version:** 9
- 

### Symptoms

- If purchase order approval surpasses Over Commit Warning % value set for fund, but does not exceed Over Commit Limit %, no block message is received and PO is approved
- If Over Commit Warning and Over Commit Limit percentages are both exceeded, operator receives a block message, but Override and Approve option is never available

### Defect Status

Issue VYG-4717 is resolved for Voyager 9.1.0 and higher.

### Replication Steps

1. Create new ledger
  2. Add one new allocated fund
  3. On Override Rules tab of new fund, check Over Commit Allowed; then set Over Commit Warning to 5% and Over Commit Limit to 200%
  4. Save ledger
  5. Create new purchase order
  6. Add line item linked to new fund, supplying a price of \$25.00 (more than the Warning and Limit)
  7. When Approving the PO, receive a block message indicating that the Overcommitment Limit has been reached, and that the operator should increase the % to 251 in order to approve. "Override and Approve" option is inactive/greyed out.
  8. Change line item price to \$15 (above Warning, but below the Limit)
  9. Attempt to Approve purchase order again; PO is approved without any warnings
