
Running Automatic Implementation Notes for "All" results in no changes

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 22
-

Problem Symptoms:

When the util_sp, "5. Run SP Utility", Automatic Implementation Notes (AIN) is run for "All", none of the changes are made in the local u-tree files.

Cause:

Misunderstanding of how the AIN works.

Resolution:

Examine the "Auto" column of each line in the AIN spreadsheet. If the column has "Yes", then it's a change which can be made automatically by the AIN utility. Otherwise, the change needs to be applied manually.

Additional Information

Note: In version 22 Service Packs 22.0.1 and 22.0.2, there are *no* notes which can be implemented automatically and, therefore, nothing for the AIN to do. The three changes with Implementation Notes (14, 15, and 61) need to be applied manually.
