## Aleph 22: Additional overdue items message not being displayed

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 22
- 

### Problem Symptoms:

Configuration for 'Additional overdue items' message (referred to in Release Notes for Version 22 p.29)

This document says to add various lines in 2 files which i have done

```
./[ADM Library]/pc_display_LNG/item-return:  
./[ADM Library]/pc_display_LNG/item-return.trn:
```

However when I return an item I see no such line added to the display (nor is the ILL items on shelf message present)

### Cause:

utf file newer than configuration file

### Resolution:

1. Remove the files item-return and item-return.trn from \$aleph\_utf/utf\_files/exlibris/alephe/u22\_x/xxx50/pc\_display\_lng/
2. Execute a return action for a test in the GUI module to recreate the utf\_file from the original file.

---

## Additional Information

The removal of the utf file can either be done

- a. manually (just remove the file in utf\_files/exlibris/alephe/u22\_x/xxx50/pc\_display\_lng/)
- b. using UTIL X/7 Clean utf\_files Directory for cleaning up all utf files which is a recommended post upgrade action.

This option should only be used when all Aleph services are stopped.
