
Z39.50 not working after upgrade to Voyager 9

- **Product:** Voyager
 - **Product Version:** 9.0.0, 9.1.0
-

Problem Symptoms

- Other libraries are unable to connect via Z39.50
- Consortium or ILL partners unable to search catalog

Defect Status

Issue VYG-5730 is resolved for Voyager 9.1.0 and higher.

Workaround

1. Edit `/m1/voyager/xxxdb/ini/z3950svr.ini`
2. Find the ZServer setting: `ZServer=localhost`
3. Change the ZServer value from "localhost" to "0.0.0.0": `ZServer=0.0.0.0`
4. Restart the z3950svr process for that Voyager instance:
 1. On Solaris: `svcadm restart xxxdb/Pz3950svr`
 2. On Linux:
 - `ps -ef | grep z3950 | grep xxxdb | awk {'print $2'} | xargs kill`
 - `/m1/voyager/xxxdb/sbin/Pz3950svr`

Additional Information

If the server supports IPv6, use ":::0" instead: `ZServer=:::0`
