

## MFHD records keyword indexed when indexing disabled

- **Article Type:** General
  - **Product:** Voyager
  - **Product Version:** 9
- 

### Problem Symptoms

Used "Do not run records through keyword index" for MFHD Data Change Job, but MFHD keyword files updated

### Cause

Working as designed. "Do not run records through keyword index" applies to bibliographic keyword indexing.

### Resolution

A documentation enhancement has been requested to clarify this behavior in the Global Data Change document.

### Additional Information

When GDC makes MFHD data changes, it exports a bib-mfhd interleaved file and uses this file to reimport the changed records. "Do not run records through keyword index" still applies to the bib records in these Data Change jobs - the MFHD keyword files will be updated, but the bib keyword files depend on the Keyword Indexing flag for the job.
