## cannot run the util\_sp 6 on solaris

- **Article Type:** General
  - **Product:** Primo
- 

### Problem Symptoms:

When trying to download 3rd party you get the following error:

[ld.so.1](#): wget: fatal: [libssl.so.0.9.7](#): open failed: No such file or directory

### Cause:

existing wget package is not supported by Solaris 11

### Resolution:

run the following before:

```
rm -rf /exlibris/product/wget-1.12
```

```
rm /exlibris/dps/d4_1/product/bin/wget
```

---

## Additional Information

We replaced the existing wget package for Solaris i386 with internal openssl dependencies so it should work on both Solaris 10 and 11.

Unfortunately it requires removal of existing wget package on Solaris 11 installations.

Customers on Solaris 11 should run the wget removal before running the util\_sp download step.
