
654H LAN index has invalid subfield

- **Product:** Voyager
 - **Product Version:** 9
-

Symptoms

654H includes subfield x, which is not a valid subfield for the 654 field.

Defect Status

Issue VYG-4625 is resolved for Voyager 9.0.0 and higher.

Replication Steps

Review index rules for 654H in SEARCHPARM table:

```
SEAR SEARCHNAME
-----
INDEXRULES
-----
654H Subject: Faceted
IX=B AL=654 S+=abevxyz4 NM=juapih
```

Note that the index includes subfield x. This is not a valid subfield.

Workaround

Turn on MARC Validation in Cataloging with Marc21 tag tables, which will not validate 654 subfield x. This will alert catalogers if the 654 subfield x is present in a record when they try to save it.
