
How to move identical fields to ARC?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 21
 - **Relevant for Installation Type:** Dedicated-Direct; Direct; Local; Total Care
-

Desired Outcome Goal:

Providing BIB fields to ARC is done using the z13 record (tab22 or tab22_arc). In case you have several identical fields (same field code) only the first one is considered and the other fields get lost. How to move identical fields to ARC?

Procedure:

Currently Aleph is not designed to move identical fields to ARC meaning for fields added in xxx01/tab/tab22 or xxx01/tab/tab22_arc only the first field occurrence is considered. An according enhancement request was already placed.

Additional Information

Workaround:

Using a specific script makes it possible to rename the double fields so that they get own field codes and can be added to tab22 or tab22_arc as single fields. Find an example in attached document.
