
When Browsing in OPAC - not all items are displayed

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

Items from sublibrary A can be displayed in the OPAC only when all the items in the BIB record belong to sublibrary A. If there are items from sublibrary B then the items from sublibrary A are no longer displayed.

Cause:

Sublibrary A not included in `./xxx50/tab tab_item_list_order`

Resolution:

1. vi `./xxx50/tab tab_item_list_order`
add sublibrary A to table

2. Restart WWW server
