
AIK: no confirmation that demo library is working properly

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 19.01
-

Problem Symptoms:

The Aleph Installation Kit (AIK) doesn't include any check to confirm that the demo library is working properly.

Cause:

Step missing from AIK.

Resolution:

The following has been added to Chapter 3, Section 6 ("Post-Installation Tasks"):

Confirm That v21 Demo Libraries Are Working Properly

The v21 AIK loads USMnn, MABnn, or UNInn tables. You need to confirm that these demo libraries are working properly....

Copy the /exlibris/aleph/a21_1/aleph/pc_exe/gui500.exe from your server and install it on your pc.

Change the USMnn (or MABnn or UNInn) lines in the ./Alephcom/tab/library.ini to your server and pc_server port.

Log in to USM01 (or MAB01 or UNInn) with the GUI catalog.exe client using username: master/ password: master .

Search using Find/Browse. Select/display several titles.

Check with:

```
s+ usm01 [mab01} [uni01]
SQL> select count(*) from z00;
[count should be > 0]
```

```
s+ usm50 [mab50] [uni50]
SQL> select count(*) from z30;
[count should be > 0]
```
